

Introduction to Epidemiology (INTEPI)

Module 4: Association and Bias

Association, Effect Measures and Confounding

Lesson Notes

KMVTECHUG

Version: 2026

Association vs Causation

Together more than by chance vs produces the outcome.

RR and OR

Compare groups; interpret with bias in mind.

Confounding

Distorts association; age and SES common.

Reflect: Give an example of a possible confounder in a diet study.

Closing

Next: bias, chance, critical reading.
