

AI Prompting (AIPROMPT)

Module 1: What is Prompting?

What is a Prompt

Lesson Notes

KMVTECHUG

Version: 2026

What is a Prompt?

A prompt is the instruction or question you give an AI system. The quality of the prompt strongly shapes the quality of the answer.

Prompting is a practical skill. Two students can use the same tool; the one who writes clearer prompts usually gets more useful results.

Why Prompting Matters

A vague prompt like help with assignment forces the system to guess topic, level, length, and format.

Clear prompting saves time, reduces wrong answers, and supports academic honesty because you stay in control of the task design.

Prompts vs Search

Search engines find existing pages. Generative tools produce new text based on patterns. Both can be wrong.

On a Ugandan campus, use search for reading lists and official notices; use prompting to outline or simplify, then check against your notes.

Reflect: Rewrite one vague prompt you used this week into a clearer version.

Closing

Module 1 continues with the anatomy of a good prompt: role, task, context, constraints, and format.
