

AI Prompting (AIPROMPT)

Module 4: Step-by-Step and Reasoning

Chain of Thought and Task Breakdown

Lesson Notes

KMVTECHUG

Version: 2026

Chain of Thought

Asking the model to work step by step can improve reasoning on multi-part problems. Example: Think step by step, then give the final answer.

You should still verify each step for important work.

Break Down Tasks

Split big goals: first outline, then expand section 1, then evidence check. Smaller prompts are easier to control.

Checklists in Prompts

Ask the model to follow a checklist: define terms, give one Uganda example, list two risks, end with a one-line summary.

Reflect: Design a 4-item checklist prompt for revising one chapter of your hardest course.

Closing

Next: multi-step workflows, verification, and avoiding over-prompting.
