

AI Prompting (AIPROMPT)

Module 4: Step-by-Step and Reasoning

Workflows and Verification

Lesson Notes

KMVTECHUG

Version: 2026

Multi-Step Workflows

Workflow example: generate outline, critique outline for gaps, expand one section, fact-check list of claims to verify in your textbook.

Verify Intermediate Steps

Do not wait until the final paragraph. Check definitions and key claims as you go. Intermediate errors multiply.

When Not to Over-Prompt

Over-prompting can confuse the model with conflicting instructions. Keep prompts as simple as the task allows.

Reflect: *Where in your last AI session could earlier verification have saved time?*

Closing

Module 5 focuses on fixing bad outputs and iteration.
