

AI Prompting (AIPROMPT)

Module 5: Fixing Bad Outputs

Failure Modes and Hallucinations

Lesson Notes

KMVTECHUG

Version: 2026

Common Failure Modes

Common failures: vague answers, wrong level, invented facts, ignored constraints, outdated details, overconfident tone.

Each failure suggests a prompt fix: add constraints, demand uncertainty notes, set level, or ask for claims to verify.

Hallucinations and Fixes

Hallucinations are plausible false statements.

Fix patterns: If unsure, say so. Do not invent citations. List claims I should verify in my textbook.

Rewrite Practice

Take a weak output and prompt: Rewrite with simpler English, three bullets, one Uganda example, no invented numbers.

Reflect: *What is one invented detail you have seen an AI produce, and how would you constrain against it?*

Closing

Next lesson: iteration loops, evaluation, and safety scope.
