

Introduction to Cybersecurity (CYBERSEC)

Module 3: Passwords and Accounts

Strong Passwords and MFA

Lesson Notes

KMVTECHUG

Version: 2026

Strong Passwords

Strong passwords are long, unique, and hard to guess. Avoid names, birth years, and reuse. Passphrases of several random words work well.

Password Managers

Managers store unique passwords and help generate them. Protect the manager with a strong master password and MFA.

Multi-Factor Authentication

MFA adds a second factor. App-based factors are usually stronger than SMS alone.

Reflect: Which critical accounts still lack MFA?

Closing

Next: account hygiene, shared devices, and recovery codes.
