

Introduction to Cybersecurity (CYBERSEC)

Module 1: What is Cybersecurity?

What is Cybersecurity

Lesson Notes

KMVTECHUG

Version: 2026

What is Cybersecurity?

Cybersecurity is the practice of protecting systems, networks, devices, and data from digital attacks, damage, and unauthorised access.

Students protect email, mobile money, campus portals, and personal photos every day.

The CIA Triad

Confidentiality: only authorised people can see the data. Integrity: data is not altered without permission. Availability: systems and data are available when needed.

Why It Matters in Uganda

Mobile money, campus portals, and social accounts are high-value targets. Fraud and phishing often target students.

Basic hygiene reduces account takeover and financial loss.

Reflect: Which of your daily accounts would cause the most harm if taken over?

Closing

Next lesson: assets, risk, and who attacks.
