

Introduction to Cybersecurity (CYBERSEC)

Module 2: Threats and Attacks

Malware, Phishing and Scams

Lesson Notes

KMVTECHUG

Version: 2026

Malware Basics

Malware is malicious software: viruses, trojans, ransomware, spyware. It often arrives via infected downloads, fake apps, or bad attachments.

Phishing and Social Engineering

Phishing uses fake messages to trick you into secrets or dangerous clicks. Social engineering manipulates trust and urgency via SMS, WhatsApp, email, and fake login pages.

Scams Targeting Students

Scholarship scams, fake jobs, account closure threats, and mobile-money tricks are common. Slow down and verify through official channels.

Reflect: Describe one scam message style you have seen and its red flag.

Closing

Next: account takeover, mobile risks, and red flags.
