

Introduction to Cybersecurity (CYBERSEC)

Module 2: Threats and Attacks

Account Takeover and Red Flags

Lesson Notes

KMVTECHUG

Version: 2026

Account Takeover

Account takeover means an attacker controls email, social, or financial accounts. From email they can reset other passwords.

Mobile and SIM Risks

SIM-swap and phone theft can intercept SMS codes. Never share OTPs.

Spotting Red Flags

Urgent threats, unexpected prizes, PIN or OTP requests, odd senders, and mismatched links are red flags.

Reflect: *What will you do the next time a message demands an OTP urgently?*

Closing

Module 3 focuses on passwords, managers, and MFA.
