

Cognitive Psychology (COGPSY)

Module 2: Human Learning

Conditions that Support Learning

Lesson Notes

KMVTECHUG

Version: 2026

Conditions that Support Learning

Learning is more likely when attention, motivation, meaningful encoding, practice with feedback, and rest are present. A student who only sits in class but never reviews, sleeps poorly, and has no goal will learn less than a student who plans short reviews and sleeps enough.

Superstitious Behaviour

Superstitious behaviour is when a person links an action to an outcome even though the action did not really cause it. Campus examples include always using the same pen in exams because it "brings luck" after one good result, or avoiding a seat because a past failure happened there.

Learning on Campus

Set a clear reason for each study block. Put the phone away for focused minutes. Explain the idea in your own words. Test yourself instead of only rereading. Protect sleep before exams. Learning is a process you can support with simple habits.

Reflect: Which habit would improve your next study week most: self-testing, spaced review, or better sleep?

Closing

Module 2 is complete. Module 3 is the memory module: encoding, storage, and retrieval.
