

Introduction to Artificial Intelligence (INTRAI)

Module 4: Generative AI and Tools

What is Generative AI

Lesson Notes

KMVTECHUG

Version: 2026

Generative AI

Generative AI creates new content: text, images, code, audio. It is still pattern learning at scale, not human understanding.

Chat-style tools complete and rephrase text. Image tools generate pictures from prompts. Code tools suggest functions. All can be useful and all can be wrong.

Strengths and Failure Modes

Strengths: speed, drafting, rephrasing, exploring options.

Failures: invented facts, weak local knowledge, outdated details, overconfident tone.

Fluent output still needs human judgment.

Text, Image and Code Tools

Text tools help brainstorm, outline, and explain. Image tools help visual drafts. Code tools speed routine programming.

None of them replace checking facts, understanding your assignment, or owning the final work.

Reflect: *When was the last time a fluent AI answer still needed fact-checking in your own experience?*

Closing

Next lesson: honest study habits, trust, and campus limits.
