

Introduction to Artificial Intelligence (INTRAI)

Module 4: Generative AI and Tools

Study Use and Honesty

Lesson Notes

KMVTECHUG

Version: 2026

Using AI for Study

Good uses: explain a concept in simpler words, generate practice questions, outline an essay, compare two definitions.

Poor uses: submitting generated text as your own without learning, inventing citations, skipping the reading.

Trust, Checking and Honesty

Verify names, dates, and legal or medical claims. Prefer primary sources for academic work.

Honesty means following your university rules. If AI assistance is allowed with disclosure, disclose. If it is not allowed for a task, do not use it for that task.

Limits on Campus

AI does not hold your degree. Exams, clinics, and workplaces still test your judgment.

Build skill in asking good questions of tools. That skill transfers to the AI Prompting course and later work.

Reflect: *What is one study task where AI help is appropriate, and one where it would break academic rules?*

Closing

You remain responsible for the final work. Module 5 looks at AI in Uganda and Africa.
