

Introduction to Artificial Intelligence (INTRAI)

Module 5: AI in Uganda and Africa

Opportunities and Capacity

Lesson Notes

KMVTECHUG

Version: 2026

Opportunities

Opportunities include better advisory services, faster routine digital work, local language tools, and new roles for people who combine domain knowledge with AI literacy.

Gaps and Constraints

Constraints include limited labelled local data, connectivity, device quality, electricity, and skilled maintainers.

Copying foreign systems without adaptation often fails. Local evaluation matters.

Building Local Capacity

Capacity means people who understand data, ethics, and domain problems - not only people who call APIs.

Your path: finish this foundation, then AI Prompting, cybersecurity awareness, and domain depth in your field.

Reflect: *What is one infrastructure or data gap that would affect an AI pilot in your home district?*

Closing

Module 5 linked global AI ideas to local conditions. Module 6 covers ethics, jobs, and next steps.
