

Introduction to Artificial Intelligence (INTRAI)

Module 6: Ethics, Limits and Careers

Bias, Privacy and Responsibility

Lesson Notes

KMVTECHUG

Version: 2026

Bias, Privacy and Misinformation

Bias can harm groups. Privacy can be violated by careless data use. Misinformation can spread when fluent false content is shared without checks.

Responsible use means asking who is affected, what data is collected, and how errors will be caught.

Jobs and Skills Change

Some routine tasks shrink. Demand grows for people who can frame problems, clean data, evaluate tools, and apply domain expertise.

Panic headlines are less useful than skill plans.

Responsible Use Checklist

Is the task appropriate for AI?

Is the data allowed to be used?

Who checks the output?

What is the harm if it is wrong?

On campus and at work, write that checklist into your habits.

Reflect: Apply the four checklist questions to one AI tool you use regularly.

Closing

Next lesson: career paths and recommended next courses on the platform.
