

Introduction to Artificial Intelligence (INTRAI)

Module 6: Ethics, Limits and Careers

Careers and Next Steps

Lesson Notes

KMVTECHUG

Version: 2026

Career Paths

Paths include: AI-aware professional in any field, data analyst, machine learning engineer (with more maths and coding), product roles, policy and ethics roles, and research.

Not everyone must become an engineer. Everyone benefits from literacy.

Next Courses and Skills

Recommended next on this platform: AIPROMPT (prompting skill), then CYBERSEC (security basics), then deeper IT tracks as needed.

Also strengthen clear writing, basic spreadsheets or data sense, and domain depth in your major.

Course Takeaways

AI is narrow, data-driven, and useful when checked. Uganda already uses it in practical systems. Your advantage is judgment plus skill.

Complete graded quizzes and check your dashboard for certificate status once progress is synced.

Reflect: Which next skill will you prioritise this month: prompting practice, security basics, or deeper domain study?

Closing

Module 6 completes Introduction to Artificial Intelligence. Continue with AI Prompting when you are ready.
